Title Create View Order Section Wireframe

Assignee @nataliavera6

 Objective Deliver a design layout that displays customer orders for staff members to access when preparing meals. Focus on readability and organization to ensure fast comprehension, mistake-proofing, and order time reduction.

 Description Design a layout for the customer order section that the cafeteria staff will access and view when creating orders. Ensure design is functional and simple to reduce time spent searching for orders.

 Acceptance Criteria • Each order has an expandable icon box • Orders being processed are separate from those currently being made or have already been delivered • Each order icon expands to showcase items in said order • All elements in page are necessary for main objective • Final wireframe is saved under /wireframes/home. • Supporting notes are documented in /docs/wireframes.md.

Final product: Page 1: The "Unread" tab features orders received and unread by staff. Once these orders are viewed by staff and sent to the kitchen, they can be marked as "Opened". Each order can be tapped to open full order view, shown in page 4.

Page 2: The "Opened" tab shows orders sent to the kitchen but not yet ready for pickup. Each order can be tapped to open full order view, shown in page 5.

Page 3: The "Finished" tab shows orders that are ready and waiting for pick-up.

Page 4: The "Full order view" for unread orders shows an enlarged view of the customer order and features two buttons at the bottom to close order or send order to the opened tab.
